

Giri's Tech Hub, Pune.

Core Java Machine Test

Batch : April/May/June-25 & Jan/Feb-26

Date : 20/03/2026

Time : 08 to 10.00 Am.

Instructions:

1. Solve all questions.
2. Input should be from user.
3. Indentation and comments mandatory.
4. Without using any inbuilt functions.

Q1. Write a java program to check number is neon number or not.

Example : A neon number is a number where the sum of digits of the square of the number is equal to the number.

Q2. Write a java program to display 1 to nth Strong Number.

Example : A Strong number is a number whose sum of factorial of digits is equal to the original number.

Q3. Write a Java program to display the following series:

3 6 12 24 48 96 192

(Each term doubles from the previous term starting at 3)

Q4. Write a java program to display the reverse array.

Input : Array = {1, 2, 3, 4, 5}

Output : Reverse array = {5, 4, 3, 2, 1}

Explanation :

The last element becomes the first, and the first becomes the last by traversing from the end to the start.

Q5. Write a java program to remove duplicated values from arrays.

Input : Array = {10, 20, 20, 30, 40, 40, 50}

Output : Unique elements = {10, 20, 30, 40, 50}

Explanation:

Traverse the array, check if element already exists before adding to result, thus avoiding duplicates.

Q6. Given two sorted arrays nums1 and nums2 of size m and n respectively, return the median of the two sorted arrays.

The overall run time complexity should be $O(\log(m+n))$.

Example 1:

Input: nums1 = [1,3], nums2 = [2]

Output: 2.00000

Explanation: merged array = [1,2,3] and median is 2.

-----ALL THE BEST-----
