SQL Machine Test

L2 Students Test Paper

Date: 21/03/2026
Timing: 10 to 12:00 Pm

Instructions :

- Solve all query.

1. Student Table :-

Column Name	Data Type	Constraint
student_id	INT	PRIMARY KEY
student_name	VARCHAR(50)	NOT NULL
city	VARCHAR(30)	
email	VARCHAR(50)	UNIQUE
join_date	DATE	

2. Course Table :-

Column Name	Data Type	Constraint
course_id	INT	PRIMARY KEY
course_name	VARCHAR(50)	
fees	INT	
duration	INT	(months)

3. Guest Table :-

Column Name	Data Type	Constraint
enroll_id	INT	PRIMARY KEY
student_id	INT	FOREIGN KEY
course_id	INT	FOREIGN KEY
enroll_date	DATE	
marks	INT	

Solve This Queries :-

- 1. Write a SQL query to find the students who scored more than 80 marks in any course. Display student name, course name and marks.**
- 2. Write a SQL query to count how many students enrolled in each course. Display course name and total students.**
- 3. Write a SQL query to find students who enrolled in multiple courses using GROUP BY and HAVING clause.**
- 4. Write a SQL query using subquery to find students who scored above the average marks of all students.**
- 5. Write a SQL query to display student names along with their enrolled course names and obtained marks by joining Student, Enrollment and Course tables.**
- 6. Write a SQL query to display student name, city and course name for students whose city is Pune using JOIN.**
- 7. Write a SQL query to display the student name and marks of the student who scored the highest marks using JOIN and subquery.**
- 8. Write a SQL query to find students who enrolled in more than one course using GROUP BY and HAVING.**
- 9. Write a SQL query to display course names and average marks obtained by students in each course.**
- 10. Write a SQL query using subquery to display students whose marks are greater than the average marks of all students.**
- 11. Write a SQL query using subquery to display students whose marks are greater than the average marks of all students.**
- 12. Write a stored procedure that accepts city name as input and displays student details belonging to that city.**
- 13. Write a SQL function that accepts course_id and returns total number of students enrolled in that course.**
- 14. Create a view that displays student name, course name and marks using JOIN.**
- 15. Write a trigger that prevents insertion of marks greater than 100 in Enrollment table.**

Condition: If marks >100 → show error.

-----ALL THE BEST-----
